Press Release

WinAIR now comes in a Compact version

Winters Instruments is pleased to introduce the WinAIR Compact Low Pressure Differential Gauge. WinAIR Compact is a diaphragm actuated, frictionless pressure gauge which can be used for measuring positive, negative or differential pressure.

Along with the original WinAIR and the WPS Series Pressure Switch, WinAIR Compact has been engineered to measure the pressure of air and non-corrosive gases.

With a full scale 5% accuracy rating, WinAIR Compact has been specially designed for monitoring status on filters, ventilation and duct systems, clean rooms, fans and blowers, paint booths, dust collectors and many other applications.

As with all our products, Winters warrants WinAIR Compact against manufacturing defects for a full five (5) years.

Winters Instruments is a global manufacturer of pressure and temperature instrumentation, with distribution in over 80 countries. Go to www.winters.com to view our extensive list of products and distributors, or call 1-800-WINTERS for more information.
