Press Release

WinAIR handles the lowest of pressure ranges

Winters Instruments is pleased to introduce the WinAIR Differential Pressure Gauge. WinAIR is a diaphragm actuated, frictionless pressure gauge which can be used for measuring positive, negative or differential pressure.

WinAIR has been engineered to measure the pressure of air and non-corrosive gases. Available in a broad pressure range from very low "H₂O column to 5"H₂O, including a variety of pressure scales ("H₂O, mmH₂O, psi, Pa and many others).

With a full scale 2% accuracy rating, WinAIR has been specially designed for monitoring status on filters, ventilation and duct systems, clean rooms, fans and blowers, paint booths, dust collectors and many other applications.

As with all our products, Winters warrants WinAIR against manufacturing defects for a full five (5) years.

Winters Instruments is a global manufacturer of pressure and temperature instrumentation, with distribution in over 80 countries. Go to www.winters.com to view our extensive list of products and distributors, or call 1-800-WINTERS for more information.
